

Cloudflare Network Interconnect

Connect Anywhere

Simplify how you connect to Cloudflare

Improve the performance and security of your network infrastructure in the time it takes to make coffee

Cloudflare Network Interconnect (CNI) allows you to connect your networks directly with Cloudflare – rather than using the public Internet – for a more reliable and secure experience. With CNI, you can bring Cloudflare’s full suite of network functions to your physical network edge.

CNI can provide enhanced capabilities when paired with:

- **CDN:** Improve cache fill performance
- **Magic Transit:** Deliver clean traffic over secure and private connections
- **Magic WAN:** Improve on-ramp performance and avoid backhauling

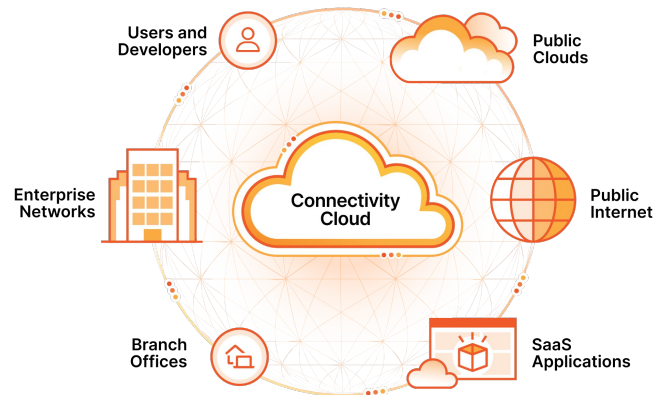

Figure 1: Connectivity Cloud

We have never charged for CNIs

Cloudflare is committed to making it even easier for customers to connect to Cloudflare and destinations on the Internet

Better Performance

Avoid unpredictable, best-effort internet paths with direct connectivity offering low latency

More secure

Each connection is reserved exclusively for the customer that provisions it — ensuring customer traffic is isolated and private

Lower costs

Customers can benefit from reduced Internet Service Provider bandwidth costs, data transfer costs and interconnection related costs
